CLAUDE TIPS:

Simple Steps:

go to claude connector install apify, do signup in apify.com and get free api tokens and add to claude..

upload your resume and use this prompt

Prompt:

I will upload my resume. Act as an **expert technical recruiter** specializing in product-based companies.

Deeply analyze my resume — tech stack, projects, problem-solving signals, internships, and academic background.

Then do the following:

1. Role Targeting Identify the most relevant **fresher / entry-level roles** I should target — SWE, SDE-1, Product Analyst, Data Engineer, ML Engineer, etc. — based strictly on my profile.

2. Company Mapping Find real, currently hiring opportunities across:

- **Tier 1 Product** .
- **Tier 2 Product**
- **Global MNCs with India R&D** — Qualcomm, Intuit, Salesforce, SAP Labs, etc.
- **High-growth Startups** — Series B and above

3. Profile Fit Score For each company/role, give a **fit score out of 100** with a one-line reason.

4. Prioritized Application List (minimum 20 jobs) Categorize into:

-  **High Probability** (score 75+)
-  **Medium Probability** (score 50–74)
-  **Stretch Roles** (score below 50 but worth attempting)

Include **direct application links** (careers page or job post), role name, and location for each.

5. Resume Gap Analysis Flag any skill gaps or missing keywords that are lowering my fit score for top-tier companies, and suggest quick fixes.

Detailed Steps:

Steps:

Sign up on Apify — Go to apify.com, create a free account, then go to Settings → API & Integrations → copy your API token.

Connect Apify to Claude — In Claude.ai, go to Settings → Integrations → search "Apify" → connect using OAuth (or paste your API token). This activates Apify tools inside Claude.

Scrape live job listings — In a Claude chat, ask: *"Use the Apify actor [curious_coder/linkedin-jobs-scraper](#) to find Python backend engineer jobs in Bangalore. Return 20 results with job title, company, description, and apply link."*

Paste your resume into Claude — In the same conversation, upload your resume PDF or paste the text so Claude can see both the job data and your profile together.

Ask Claude to rank the jobs — Prompt: *"Score each job from 0–100 based on how well it matches my resume. Consider tech stack, domain, and experience level. Return a ranked table with fit score and reason."*

Refine with follow-ups — Ask things like *"Show only scores above 75"*, *"What skills am I missing for the top 3 jobs?"*, or *"Write a tailored cover note for job #1."*

Repeat weekly — In Apify Console, schedule your scraper to run every Monday so fresh job listings land automatically and you can re-rank against your resume anytime.

Prompt:
